

Climate Action Report Comments

Parks and Recreation Advisory Board – 8.10.2020

Recommendation		Voting	Comments
Adaptation and Resilience	AR.1) Public Health	6 Approve as written 1 Approved with noted consideration	<p>A consideration of nature based solutions such as tree planting over hard structure solutions, would make this more complete.</p> <p>Air conditioning would seem to exacerbate the problem.</p>
	AR.2) Water Conservation	7 Approved with noted consideration	<p>The 35% reduction goal does not appear to have the data behind it to support it. How would we get to 35% reduction when Parks and Open Space is already using the most drought resistant/tolerant turf available?</p> <p>More research is required.</p> <p>Balancing act between users: city v's residential. How much would actually need to be reduced in Parks and Open Space?</p> <p>Asking residents to reduce water use while possibly charging more for water seems conflicting.</p>
Land Use and Waste Management	LW.1) Extending Agricultural Zoning	2 Approve as written 5 Approved with noted consideration	<p>Interesting concept lacking details on how it would be implemented and the different impacts.</p>

			Idle land transition, not much for PRAB to consider as it does not address recreational land.
Transportation	T.3) Connected Bikeways	7 Approve as written Approved with noted consideration	
Any other comments?			

Climate Action Report High-Level Comments

Comments from individual board members and were not voted on by the full board.

	High-Level Comments
Climate Action Task Force	Increased protection of Open Space and adaptation strategy. Balancing Act, green islands. Further discussion on how we can balance the residents use and the city's use.
JTP Committee Equity Recommendations
